

Western Caspian University
Environmentally-Friendly Action Plan

Energy instructions

Western Caspian University (WCU) invites not only its students, university staff members, but also community to make contribution in sustainable environment. The purpose of this instruction is to increase awareness about energy management.

We can make a substantial step in order to save energy by implementing of this plan such as:

- Reduce energy consumption by turning off lights and electronic devices if not necessary
- Prefer led lamps to achieve energy efficiency
- Reduce time on water heating
- Switch to alternative energy such as:
 1. Provide energy efficiency standards and technology in construction or innovation of buildings (electrical and thermal storage, sustainable materials are to be expected)
 2. Ensure new or existing buildings with solar and/or wind energy systems

Western Caspian University gives instructions about the energy management in its buildings and website for students, university staff, and visitors. In addition, seminars to increase energy usage awareness are conducted to community for free by WCU. The university uses alternative energy sources such as constructing panels to receive solar power.
